

csv-repeat: repeat forever

Sometimes, one may need to repeat the same record, just as linux **yes** does. The problem with **yes** is that you cannot tell it to repeat at a given time interval.

Now, **csv-repeat --ignore-eof** can do it for you, which is useful for example, if you need to quickly fudge a sort of heartbeat stream, a simulated data stream, or alike:

```
> echo hello | csv-repeat --period 0.1 --ignore-eof | head -n5
hello
hello
hello
hello
hello
> echo hello | csv-repeat --period 0.1 --ignore-eof | csv-time-stamp | head -n5
20180420T034741.498771,hello
20180420T034741.600020,hello
20180420T034741.700202,hello
20180420T034741.800367,hello
20180420T034741.900539,hello
```

Binary mode is supported as usual.
